Goldstar updates corporate presentation

Montréal, Québec – February 25th, 2019 – Goldstar Minerals Inc. (“Goldstar” or the “Corporation”) (TSX-V: GDM) is pleased to announce that it has updated its corporate presentation outlining the current exploration strategy. The field work done and review of government work has confirmed the presence of intrusion related gold systems (IRGS) in the project area.

Detailed airborne geophysical data acquired in 2016 by the Corporation outlined prominent structural features that could represent buried intrusions. Five (5) new potential intrusions that were never tested by diamond drilling were identified, representing a total potential area of 7 km² where Goldstar intends to focus its exploration efforts.

The presentation highlights the near surface potential of the project area. The presentation is available through the following link:
